

Autism Spectrum Disorder and Social Communication Disorders

Brief Description:

Social (Pragmatic) Communication Disorder is characterized by persistent difficulties in the social use of verbal and nonverbal communication which results in functional limitations in effective communication, social participation, social relationships, academic achievement, and/or occupational performance.

Autism Spectrum Disorder is characterized by persistent deficits in social communication and social interaction across multiple contexts and the severity is based on social communication impairments and restricted repetitive patterns of behavior.

- **Understood** goal is to help the millions of parents whose children, ages 3–20, are struggling with learning and attention issues. We want to empower them to understand their children's issues and relate to their experiences. With this knowledge, parents can make effective choices that propel their children from simply coping to truly thriving.
